

Your Website Dashboard

A complete guide for Gladys Ogo · Prepared by PR3NC2 Technologies

Your website has a private dashboard where you can change the words, links, events, speaking record and prices on your site, without waiting for a developer. This guide explains every part of it.

Contents

1 Logging in · 2 Layout · 3 Publishing · 4 Editing page words · 5 Speaking record · 6 Events · 7 Links, prices and social media · 8 What it doesn't change · 9 If something goes wrong

1. Logging in

1. Open **ogogladysamarachi.com/admin** in your browser. It works on a phone, but a laptop is easier for long edits.
2. Tap **Login with GitHub** and sign in with the GitHub account set up for you.
3. If asked, tap **Authorize**. You land on your dashboard.

Keep it private

Only the GitHub account added to your website can edit it. Don't share this login, because anyone with it can change your live website.

2. How the dashboard is laid out

The left side has two groups. Open one, then pick the item you want to edit.

Site content	The things that change often: Speaking record , Events and classes , and Links, prices and emails .
Page words (edit any text)	Every piece of wording on the site, grouped by section: Menu, Hero (top of page), About, Services, Brands and testimonials, Speaking, PLSC community, Events, Rework Session, Contact, Footer and the Sticky bar.

3. Publishing a change

Nothing changes on your website until you publish.

1. Make your edits in the open section.
2. Tap **Publish** at the top, then **Publish now**.
3. Wait about one minute, then refresh your website. Your change is live.

Remember

If you leave a section without publishing, your edits are not saved. Always finish with Publish, then Publish now.

4. Editing the words on your pages

1. Open **Page words (edit any text)** and choose a section, for example **About**.
2. Each box is labelled with the start of the text it controls, for example *Paragraph: I'm Gladys Ogo, known as....* Find the box that matches the line you want.
3. Change the words, then Publish.

Formatting in text boxes

Write normally. You can also use **bold**, **italic** and **
** for a new line. Other code is removed on purpose, so you can't break the page layout by accident.

Good to know

If the same words appear in two places (a button label in the menu and the sticky bar, say), they share one box. Changing it changes both places.

5. Speaking record

Open **Site content**, then **Speaking record**.

Add an engagement	Tap Add engagements . Fill in Year, Title, Description, Date and place, Role and Flyer.
Year	Four digits, for example 2026. The site shows the newest year first automatically.
Flyer	Tap Choose an image and upload. A JPG or WebP under 1 MB works best.
Edit or delete	Tap an entry to open it. Use the delete icon on the entry to remove it.
Reorder	Entries sort by year automatically. Drag only to arrange entries within the same year.

6. Events

Open **Site content**, then **Events and classes**.

Show a next event	Switch on to show the event. Switch off when nothing is planned.
Month, Year, Title, Text	What appears on the event card.
Button label	The words on the button, normally <i>Register</i> .
Registration link	Paste the link where people register. Leave it empty and visitors who tap the button see your "No event for now" message.
No-event message	The two lines shown when there is no event or no link.

7. Links, prices, emails and social media

Open **Site content**, then **Links, prices and emails**.

Contact and PLSC emails	Where visitors are told to reach you. They update everywhere on the site.
PLSC registration link	The link behind the Register for PLSC button.
Consultation prices	Type each amount exactly as it should show on the site, including the naira sign.
Booking link	Your Nestuge booking link for consultations.

LinkedIn, Instagram, X, Blog, TikTok	Paste the full profile links. The TikTok icon only appears when you add a link. Empty the box to hide it.
Google title and description	What search results show for your site. Keep the title short and the description to one or two sentences.
Link preview description	The text shown when your link is shared on WhatsApp or LinkedIn.

8. What the dashboard does not change

The dashboard changes wording, links, and the speaking and event lists. It does not change layout, colours, fonts or photos, and it can't add whole new cards or sections. For example:

- Adding or removing a testimonial, brand logo or service card
- Swapping the hero or About photos
- Adding a new section or page
- Design, colour or layout changes

Send these to PR3NC2 Technologies. Update everything else yourself.

9. If something goes wrong

- 1. Change not showing?** Wait a full minute after publishing, then refresh. If it still isn't there, clear your browser cache.
- 2. Can't log in?** Check you're using the correct GitHub account. If it still fails, message PR3NC2.
- 3. Made a mistake?** Every change is recorded, so a developer can restore an earlier version. Tell PR3NC2 what you changed and roughly when.
- 4. Contact form messages:** they are collected by your site host. If you stop receiving them by email, let PR3NC2 know so notifications can be checked.

Need help?

Send what you want changed and a screenshot of the problem, and PR3NC2 Technologies will help.
