

Your website dashboard

Your website has a private dashboard where you can update key content without a developer. Changes go live about a minute after you publish.

1. Log in

Open ogogladysamarachi.com/admin and tap **Login with GitHub**. Use the GitHub account that was set up for you. Only that account can edit the site.

2. What you can edit

Speaking record: every talk, panel and session shown on the site.

Events and classes: the next event and its registration link.

Links, prices and emails: contact emails, consultation prices, booking link and PLSC registration link.

3. Publish a change

1. Open the section you want and edit the text.
2. Tap **Save**, then **Publish** and choose **Publish now**.
3. Wait about one minute, then refresh your website. Your change is live.

4. Add a speaking engagement

Open **Speaking record**, tap **Add engagements** and fill in the year, title, description, date and place, role and flyer. Use a clear JPG or WebP flyer under 1 MB. Entries sort by year automatically, newest first. To remove one, open it and tap the delete icon.

Using it day to day

Event with no registration link

Leave the registration link empty. Visitors who tap Register will see "No event for now". Switch off **Show a next event** when none is planned.

Messages from your contact form

Messages sent from the website contact form are collected by your site host and forwarded to the email you have set up for notifications. If you stop receiving them, tell your developer so notifications can be checked.

Photos and flyers

Upload from the image field inside the dashboard. Keep files under 1 MB. If a flyer looks cropped, try one closer to a 4:5 portrait or 16:9 landscape shape.

If something looks wrong

1. Refresh the page and wait a minute after publishing.
2. Check the year is four digits, for example 2026.
3. If the problem is still there, send a screenshot to PR3NC2 Technologies and it will be fixed.

What not to do

Don't share your GitHub login. Your dashboard changes the live website.

Need help?

PR3NC2 Technologies remains available for technical support. Send what you want to change and a screenshot if something is not working.
